- All parts of the system incentivised to enable the patient to manage themselves where possible

- Commission whole planned care system for each specialty or group of specialties

- Primary Care continues to be first port of call for majority of patients
- Clear clinical thresholds and pathways in place to support onwards referral with MoM support
- Clinical support for primary care in management of patients e.g. training sessions, patient leaflets, telephone advice

- Onwards referral made to specialty MDT for, advice and guidance where required and triage of referrals
- Majority of patients seen in one stop shop approach in community based setting by a MDT team across traditional provider boundaries e.g. consultant, nurse specialist, GPwSI, therapies etc
- Direct listing to secondary care where appropriate and possible

- Specialist input or acute facilities required
- Elective procedure/surgery required
