

COPD Patient Shared Care Plan - What are normal observations for this patient?

Introduction
<p>The Respiratory Operational Group is a joint group between the CCG, Ipswich Hospital, East Suffolk Community Respiratory Service and a patient representative. The group work together to look at transformation opportunities across the system to improve patient experience, management and outcomes for patients.</p>
What is it?
<p>The group have developed a COPD Patient Shared Care Plan where the assessing practitioner can record what the normal observations for the patient are. This record will be available across primary, community and acute care records so that it is familiar to all services and of use in emergency/out of hours situations.</p> <p>This Plan will be included in the My Care Wishes folder, available on practice, acute and community clinical systems and can be completed by an appropriate clinician.</p>
Start date
<p>This will be available on practice clinical systems and on the CCG website by the end of March 2018.</p>
