

The study:

It is a very stressful time for GPs, highlighting the need for accessible evidence-based interventions to combat GP occupational stress.

This study will help us identify key mechanisms that contribute to individual differences in response to high occupational stress in GPs. Subsequent research will test a new intervention for GP stress.

We are looking for **UK doctors under 70 who have primarily worked as a GP in the past year**. We ask them to complete a short (20 min) online study.

If you would like to read more about the study and/or to take part, please go to https://kcliop.eu.qualtrics.com/jfe/form/SV_2tvsha9QOdLogzH.

If you choose to participate, you will be able to enter into a prize draw with a chance to win one of four £75 National Book Token vouchers.

Research for the Department of Psychology, King's College London. Ethics ref: HR-19/20-20950.

Thank you for your help and please get in touch if you have any questions.

Kind Regards,

Oskar Filip Kaleta
