

Please share our Kawasaki Disease Clinical Resource Pack - a Doctor-developed training pack for Primary care!

We are extremely grateful that a number of CCGs and Health Boards including Somerset, Norfolk and Waveney, Huddersfield and Western Isles have already distributed packs to their GP surgeries. Kawasaki Disease is increasingly common and today it is the leading cause of acquired heart disease in UK children, which is why our primary aim is to build knowledge and raise awareness.

Please use the button at the bottom of this email to 'Download our Kawasaki Disease Clinical Resource Pack'. This pack includes an information letter, clinical information posters, awareness posters, a long-term effects leaflet for parents and carers, and a Kawasaki Disease 'Myths & Facts' information sheet produced with our Scientific Advisory Board – leading UK paediatricians and internationally recognised experts in Kawasaki Disease. The Royal College of Paediatrics and Child Health have endorsed our main information leaflet within the pack.

A recent study by the British Paediatric Surveillance Unit led by Professor Robert Tulloh, a leading UK expert in Kawasaki Disease (and one of our Trustees) showed that children treated early for Kawasaki Disease had a much lower risk of heart damage than those treated later, so there is a real opportunity to transform outcomes for our children - by recognising Kawasaki Disease we can achieve early diagnosis which is simply critical in reducing the risk of long-term heart damage.

I do hope you can help with distribution of our Kawasaki Disease Clinical Resource Pack and thank you in advance for forwarding this email to GP Practices within your region.
