

FIND THE MISSING MILLIONS

Hepatitis C (HCV) is spread when infected blood enters your body. It is now a curable disease but half of the people who carry the virus are not aware of it.

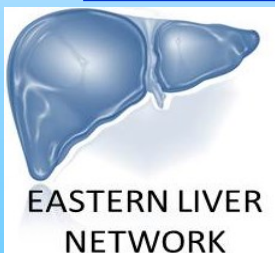

You might want to consider a test if you have ever:

- Had a needlestick or sharps injury
- Ever had vaccinations, dental or medical treatment (inc. cosmetic surgery) in countries where HCV prevalence is higher
- Ever injected any drugs or steroids
- Received blood clotting products before 1987 or had a blood transfusion or organ transplant before 1992
- Ever shared any drug taking paraphernalia
- Ever lived with, or cared for, someone who injected drugs or had HCV
- Had man to man sex or attended a chemsex party
- Had a tattoo or piercing that was 'home made' or by an unlicensed practitioner
- Ever lived in a children's home, prison or residential school
- Shared a razor, hair/nail clippers or toothbrush
- Attended a botox party
- Had sex with a man or woman who sells sex
- Had any liver problems e.g. abnormal liver blood tests or alcoholic liver disease
- Come from a country where HCV is more common
- Been born to a mother who has had HCV

TESTING FOR HCV IS SIMPLE
