A&G Request Conversions to 2WW Referral

There are some occasions where a GP has requested A&G, given permission to convert if necessary, and our clinicians believe there is a need for the referral to be a 2WW. Unfortunately, we are unable to convert A&G to a 2WW pathway. In order for these to come through on the correct proformas and via the correct priority setting and eRS service, we will need to send these back to GPs to convert into a referral and send via the correct eRS 2WW service. These are the only instances where the provider will not be able to convert into a referral.

If you have any questions or concerns about this process, please submit these to the Primary Care Liaison Service via cuh.gpqueries@nhs.net who can refer these to the appropriate operational and clinical representatives.
