

## Consent override

We have been notified that from the 22<sup>nd</sup> March the consent override functionality will be removed completely from SystemOne.

The GP+ service will only see patients if they have full access to their record. This means that patients will not be seen by GP+ unless they have been asked to share their record and had their consent recorded in SystemOne correctly.

From 22<sup>nd</sup> March GP+ doctors will **not** see these patients if consent to share has not been recorded therefore these patients will be turned away.

In order to support all services we recommend that practice staff ask as many patients as possible for a decision on sharing their records with immediate effect
