

## New DXS Release (version 5.2.10) – February 2020

This version focuses on improvements to the search functionality and display of search results. The enhancements include:

1. Search results are now grouped in categories denoting the type of document, making it quicker to identify the document you need.

2. Multiple keywords or search terms can now be used when searching for a document, and wildcards have been added. This allows for partial words to be used when searching.
3. Signatures are scaled automatically if they are too large for the field.
4. The draft watermark is now displayed on the screen around the document rather than on the document itself.
5. It is now possible to search for words within a DXS document. Selecting the F3 button on the keyboard whilst in a DXS document will bring up a Find box. The search term will be highlighted in blue if it is within the document.
