Adult (≥18 years)
Asthma Quick Reference Guide

1st choice inhaler for each step is listed below. See over the page for alternative inhalers

Key Points:

- Advise patients with asthma to stop smoking – refer to One Life Suffolk/Provide for advice and support.
- Start treatment at the step most appropriate to initial severity of their asthma.
- When control is good, treatment should be decreased[1]
- Patients should receive training for each device prescribed, and be able to demonstrate satisfactory technique.[1]
- Advise patients to monitor symptoms and return to clinic if no improvement or if symptoms worsen.
- Offer annual influenza vaccination to all patients with asthma that require continuous or repeated use of **inhaled or systemic** steroids or with previous exacerbations requiring hospital admission[2].
- Offer a one-off pneumococcal vaccination to patients who require continuous or frequent repeated use of **oral** corticosteroids (i.e. at a dose equivalent to ≥20 mg prednisolone daily)[2]
- Check inhaler technique and concordance and reconsider diagnosis if response to treatment is unexpectedly poor.[1]
- Ensure patient has a self-management plan.
- Perform yearly asthma review.
- Consider a spacer device for patients prescribed a metered dose inhaler (MDI) who are:
  - Having difficulty co-ordinating actuation and inhalation.
  - Receiving high doses of inhaled corticosteroid (ICS) (>800 mcg of beclometasone or equivalent daily).

BTS guidance no longer recommends the use of SABA alone in asthma

Use inhaled SABA prn in combination with other inhalers at any point (Salbutamol 100mcg MDI or Easyhaler 1-2 puffs prn)
Consider stepping up if using more than three times per week.

Stepping Up?

Think C.T.T.

- Compliance
- Technique
- Trigger factors

Step 1: Add in regular ICS
[BDP 400mcg/day]
(Qvar 50mcg 2 puffs BD)
Can decrease dose if controlled

Step 2: Add LABA using combination inhaler
[BDP 400mcg/day]
(Fostair 100/6 1 puff BD or Flutiform 50/5mcg 2 puffs BD)

Step 3: Benefit from LABA but control still inadequate, increase ICS dose in combination inhaler [BDP 800mcg/day]
(Fostair 100/6 2 puffs BD or Flutiform 125/5mcg 2 puffs BD)

If absolutely no response to LABA,
Consider stopping combination device and starting regular ICS
[BDP 800mcg/day]
(Qvar MDI 100mcg 2 puffs BD)
If asthma still not controlled add either a leukotriene receptor antagonist (LTRA) (montelukast 10mg ON) or theophylline

Seek specialist advice before proceeding

Step 4: Consider trial of:

- Increasing ICS dose up to BDP 2000mcg/day (Fostair 200/6 2 puffs BD or Flutiform 250/10mcg 2 puffs BD)
- **Or** addition of either a LTRA (montelukast 10mg ON) or theophylline

On specialist recommendation only: Add in LAMA
Tiotropium Respimat 2.5mcg 2 puffs OD

Step 5: Refer to respiratory specialist

Combined maintenance and reliever therapy (FMART) can be considered for patients who have a history of asthma attacks on medium dose ICS or ICS/LABA

Stepping Down?

- Reduce ICS dose slowly
- Aim to use the lowest effective ICS dose
- Consider a treatment review every 12 weeks

Flow chart based on recommendations from the British Thoracic Society and Scottish Intercollegiate Guidelines Network[1]

	Step 1 [BDP 400-500mcg]	Step 2 [BDP 400-500mcg]	Step 3 LABA benefit but inadequate response [BDP 800 – 1000mcg]	Step 3 LABA no benefit [BDP 800-1000mcg]	Step 4 [BDP 1600 – 2000mcg]	Step 5
Formulary options (for new initiations)	Qvar 50mcg (MDI) 2 puffs BD Qvar Autohaler 50mcg (BAA) 2 puff BD Clenil Modulite 100mcg (MDI) 2puffs BD	Fostair 100/6mcg (MDI)* 1 puff BD Fostair NEXThaler* 100/6 (DPI) 1 puff BD NB. One inhaler will last 2 months at this dose Flutiform 50/5mcg* (MDI) 2 puffs BD Flutiform K-haler 50/5mcg* (BAA) 2 puffs BD	Fostair 100/6mcg (MDI)* 2 puffs BD Fostair NEXThaler 100/6* (DPI) 2 puffs BD Flutiform 125/5mcg* (MDI) 2 puffs BD Flutiform K-haler 125/5mcg* (BAA) 2 puffs BD	Qvar 100mcg (MDI) 2 puffs BD Qvar Autohaler 100mcg (BAA) 2 puffs BD Clenil Modulite 200mcg (MDI) 2 puffs BD AND if still uncontrolled Montelukast 10mg tablets ON	**Seek specialist advice** Fostair 200/6 (MDI)* 2 puffs BD Fostair NEXThaler 200/6* (DPI) 2 puffs BD Flutiform 250/10mcg* (MDI) 2 puffs BD OR Montelukast 10mg tablets ON	**Refer to specialist**
	Use SABA as required (Salbutamol MDI 100mcg+spacer or Easyhaler Salbutamol 100mcg 1-2 puffs prn) Consider stepping up if needing 3 doses or more per week					

* Inhaler features a dose counter

Colour coded costs

Cost brackets for one year of regular treatment at specified dose.

<£150	£150 - £299	£300 - £399	>£400

Key

MDI - Metered dose inhaler
DPI - Dry powder inhaler
BAA - Breathe actuated aerosol
ICS - Inhaled corticosteroid
SABA - Short acting ß$_2$ agonist
LABA - Long acting ß$_2$ agonist
LTRA - Leukotriene receptor antagonist
[BDP xxxmcg] - Equivalent dose of beclometasone dipropionate

Complete control of asthma: The 6 measures[1]

1. No daytime symptoms
2. No night-time awakening due to asthma
3. No need for rescue medication
4. No exacerbations
5. No limitation on activity including exercise
6. Normal lung function (FEV1 and/or PEF>80% predicted or best

With minimal side-effects

Criteria for specialist referral in adults[1]

- Prominent systemic features (myalgia, fever, weight loss)
- Unexplained restrictive spirometry
- Suspected occupational asthma
- Monophonic wheeze or stridor
- Chronic sputum production
- Chest X-ray shadowing
- Severe asthma exacerbation
- Unexpected clinical findings (i.e. crackles, clubbing, cyanosis)
- Persistent non-variable breathlessness
- Poor response to asthma treatment/ uncontrolled at step 4
- Marked blood eosinophilia (>1x10^9/l)
- Diagnosis unclear

Useful resources:

- IESCCG Asthma action plans
- High dose steroid cards order form
- Asthma UK patient resources and action plans
- Primary Care Respiratory Society (PCRS-UK)

High dose steroids

[BDP>800mcg daily]

Ensure patient has:

- a steroid card
- a spacer device (patients using an MDI only)

Spacer devices (for MDI devices only)

- Replace device every 12 months
- Use either Space Chamber Plus compact (dishwasher safe) or Aerochamber Plus
- Flo-tone device (a mini spacer with training whistle) is available in primary care to encourage correct pMDI use
